

- ▶ *Implementation with an unlimited number of SURVISION cameras*
- ▶ *Visualisation of real time or recorded streams*
- ▶ *Search by time, by number plate or by name*
- ▶ *Activation of alert for presence of vehicles on black list*
- ▶ *Activation of alert for the presence of stalkers*

VISOLOG

VEHICLE LOG MANAGEMENT SOFTWARE

SUPPORT DOCUMENT VISOLOG USER MANUAL

FUNCTIONAL CHARACTERISTICS

The VISOLOG software provides a simple and user-friendly interface for the use of data produced by the SURVISION cameras (VISIPAK ANPR, VISIPAK MPEG, NPP...).

A complete turn-key solution:

The VISOLOG allows us to visualise and store the data from cameras (vehicle registration number, time-stamping, JPEG image of the vehicle).

It provides a complete log search interface according to several criteria (registration number, time and date, camera name etc....).

Alert activation modules on the presence of vehicles on the black list (stolen, surveyed or wanted vehicles...) and on the presence of stalkers (vehicles passing repeatedly) allow for a significant improvement in site security.

An appropriate solution for high-risk sites:

The VISOLOG is a vehicle control solution appropriate for the surveillance of high-security sites:

- Industrial sites (factories, energy production sites, Seveso sites ...).
- Official buildings (embassies, ministries, Police HQ...).
- Public sites (airports, train stations, stadiums...).
- Etc...

A solution easy to install and use:

The VISOLOG software can be installed on any PC running on Windows. It is quick and easy to implement and has a simple and user-friendly interface. The access to the application is secured, and the administrator can limit the user access to certain functions.

TECHNICAL CHARACTERISTICS

- Operating system Windows 2000 Pro or Windows XP Pro.
- Connection by IP to an unlimited number of SURVISION cameras.
- Real-time visualisation of video stream from the cameras (CIF MPEG4 streams).
- Storage of log data (registration number, time-stamping, JPEG image of vehicle).
- Adjustment of video stream and JPEG compression.
- Access protection by log-in and password.
- Generation of logs in the form of text file and image file.
- Configuration of the length of log storage.
- Limited or cyclic recording.
- Search by partial or total plate number, by time period and by camera name.
- Real-time alert of the presence of a vehicle on the black list.
- Real-time alert on the repeated passages of the same vehicle (anti-stalker function).
- Configuration of anti-stalker function (of frequency and time intervals).
- Saving and reuse of user configurations.
